Dow Offers New Range and Pasture Herbicides

Adapted from company news release by **Kim Kanzler Holt**

Dow AgroSciences has introduced advanced chemistry for range and pasture with new Milestone™ and ForeFront™ R&P herbicides. Both products are based on Dow AgroSciences' unique, new aminopyralid chemistry.

Milestone™ features

The company promotes the following product claims.

- Provides superior control of many noxious and invasive weed species, including biennial and perennial thistles, knapweeds and yellow starthistle
- The new standard for tropical soda apple control (including residual seedling control)
- Specifically designed for rangeland and pasture use
- Excellent postemergence and season-long residual control
- Controls many annual, biennial and perennial weeds at low usage rates [4-7 ounces (oz.) per acre]
- Nonvolatile, non-2,4-D formulation
- Systemic and residual activity effectively controls weeds at multiple growth stages

- Safe to desirable grasses
- Ideal foundation herbicide; excellent tank-mix partner with brush control products, such as PastureGard® or Remedy® herbicides
- No grazing restrictions for any type of livestock or wildlife, including lactating dairy animals, beef cattle, sheep, goats and horses
- Is not a federally restricted use pesticide

For more information visit www.milestoneherbicide.com.

ForeFront™ R&P features

The company promotes the following product claims.

- Controls more than 60 broadleaf weeds without tank-mixing
- No livestock grazing restrictions, including beef and lactating dairy cattle
- Season-long performance
- No applicator's license required
